

WFS Analytics

Access to accurate, actionable metrics is more important than ever before. With true visibility across your entire workforce, WFS Analytics empowers strategic decision making and ensures that your organisation is making the most of every investment.

Designed to transform raw data into actionable information, WFS Analytics brings powerful ad-hoc reporting capabilities to our cloud-based workforce management suite. Simple and intuitive, WFS Analytics empowers users to quickly and easily build custom views of labour-related data and share that information with executives, supervisors, and coworkers across the business.

Real-Time Insights into Your Workforce

WFS Analytics provides an unmatched degree of visibility into your labour activities by location, job function, division, and across the enterprise. Patterns become instantly recognisable, best practices emerge and managers have the concrete, data-driven information they need to make timely decisions regarding work rosters, labour mix, and the right practices to maximise productivity.

A Comprehensive Analytics Platform

A true enterprise analytics platform, WFS Analytics is not limited to labour data. The solution is designed to handle data from multiple business systems, and makes it easy for you to correlate those data with the information from your WFS Suite. This capability empowers you to firmly establish the links between labour activities and other corporate metrics, such as productivity and unit costs, and to ultimately close the loop on how workforce strategies impact financial results.

Easy-to-Use Tools

WFS Analytics makes powerful analysis and reporting capabilities accessible via a simple drag-and-drop environment. No complex report building language. No extensive training. No barriers between you and the information you need. Callout capabilities help ensure that your organisation never has a gap in coverage.

KEY SOLUTION FEATURES

- Quickly design ad-hoc reports
- View and manipulate real-time labour data
- Create graphs to highlight report results
- Send manager notifications when reports cross specified thresholds
- Import data from other sources throughout the enterprise
- Correlate other business data with labour information from WFS Suite
- Gain greater insight into how workforce management strategies impact other areas of the business
- Schedule reports to run at predetermined times
- Distribute reports in multiple formats (Excel, PDF, HTML, CSV).

Continuous Improvement

For organisations dedicated to the practice of continuous improvement (such as Six Sigma or other similar programs), WFS Analytics serves as a powerful tool to ensure your operations continue to run at peak efficiency. Thresholds can be set within the system and alerts can be triggered, should any of those thresholds be crossed. As a result, managers will be able to identify and address small issues before they have an opportunity to grow into large problems.
